Generator & ATS Service

Huntington Power believes that world-class products deserve world-class support. Unlike some companies, we warranty and maintain the complete power generation package. Our fleet of service vehicles is centrally dispatched to provide the quickest possible response.

Our service staff takes pride in exceeding the expectations of our customers. Our technicians receive ongoing, comprehensive technical training combined with hands-on experience in the repair and maintenance of all the components of the power generation package.

Our integrated dispatch system schedules and tracks our technicians, customer maintenance programs and equipment service history. This system enables Huntington Power to provide expedient, timely professional service for emergency repair, scheduled maintenance, and system commissioning and testing for all of our customers.

Contact Huntington Power today about a scheduled maintenance plan. This is an important investment to protect against potentially damaging power outages.

YOUR WORLD-CLASS POWER SYSTEM DESERVES WORLD-CLASS SERVICE

When it comes to ensuring the performance, reliability, and long life of your backup power system, there is no substitute for outstanding service and maintenance. Huntington Power can provide you with the world-class support you expect — with the factory-trained experts, on-call emergency service, and genuine OEM parts you need for proper service and maintenance of your backup power system.

You invested in a backup power system because for you a power failure is more than just an inconvenience. It could cripple your ability to do business, especially if yours is a mission critical application, like a data center, hospital, or nursing home. That's why Huntington Power is one of the leading backup power system service providers to many national chains and major telecommunications companies. Don't trust the service and maintenance of so critical an item as your backup power system to anyone other than a factory-trained EGSA Certified servicing dealer like Huntington Power.

HPE REMOTE SYSTEM MONITORING

Remote monitoring hardware can provide a direct communication link between you and your backup power system. Huntington Power can provide the ability for you to monitor every aspect of your system's operation in real time.

You can be notified of all alarms, so you can immediately call us to respond to an emergency condition. Remote Monitoring helps to remotely diagnose the problem and to monitor system configurations and parameters to minimize the impact of the problem. You can even help us recognize system anomalies and take corrective action before a problem develops.

RIGOROUS FACTORY TRAINING AND CERTIFICATION

Huntington Power's factory-certified technicians receive the most comprehensive, hands-on training in the industry:

- Performing system maintenance
- Conducting diagnostic procedures
- Repairing all systems components

Our technicians progress through multiple levels of certification by passing stringent written exams and demonstrating hands-on proficiency — all supervised by instructional staff. And all of our technicians must re-certify every two years. This ensures that Huntington Power has the most up-to-date product knowledge to effectively maintain and service your backup power system.

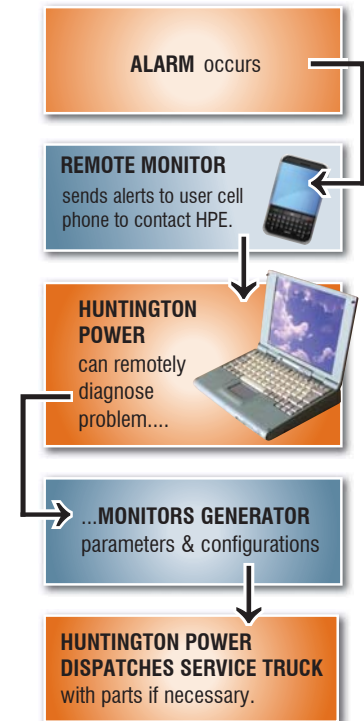

GENUINE OEM REPLACEMENT PARTS

OEM replacement parts can ensure optimal performance and reliability from your backup power system:

- Designed specifically for your system
- Ensure that your system is maintained to factory standards
- Engineered to the highest quality standards
- Maintain your warranty

As an authorized distributor, Huntington Power stocks and uses genuine OEM maintenance and repair parts when necessary to service your system.

Generator Rentals

Huntington Power offers fast, complete rental support including sizing, supply and service which allows customers to bridge any power outage with the confidence of a one call solution. Our mobile units range from 25 to 2,500 kVA, with optional cables, transformers, fuel cubes and duplex distribution boxes. HPE's state of the art equipment and world class service enable our customers to rent peace of mind 24/7/365.

HPE Rental Solutions Include:

- 24/7 emergency power
- Mobile gensets from 25 - 2,500kVA
- Temporary shutdown coverage
- Disaster recovery planning
- Weddings and special events
- Portable cables and distribution boxes
- Jobsite power
- Long term prime power applications

24/7

ROUTINE MAINTENANCE SERVICES

A routine maintenance program will help ensure that your system is in top operating condition and complies with all warranty guidelines. This is more than just an oil and filter change—it is a properly executed plan for inspecting and maintaining the entire system to identify problems before they occur:

- **Verify oil and coolant levels**
- **Adjust or change fluids**
- **Replace filters**
- **Inspect and maintain the fuel delivery system**
- **Inspect and maintain the electrical system**
- **Ensure belts are in good working order**
- **Operate unit while under load**
- **Properly dispose of waste**

The factory-certified technicians at Huntington Power service all brands of backup power systems, and are well equipped to provide you and your system with the best possible care. We can customize a maintenance schedule around your specific system and the unique requirements of your particular application.

ON-CALL EMERGENCY SERVICE, 24/7/365

You can never predict emergencies, and the last thing you need is for your system to be offline when it's needed most. Huntington Power is always there to service your system, even during non-business hours. That means we always have access to everything we need to get your power system back into operation quickly — even additional expertise to assist us in troubleshooting your system, if necessary.
